

1 Annotations the viewer draws

None of these annotations has an appearance stream, so every viewer draws them itself from C, IC, BS, DA, DS and the icon name. For a theme to work, the viewer has to recolour them too.

2 Fields, fonts and forms the viewer resolves

NeedAppearances is true and no field has an appearance stream, so the viewer builds each one from MK and DA. The standard 14 fonts have no Widths, and one form XObject has no Resources: all allowed before PDF 2.0.
